

9.1 TEST CASES

Table 2: Detect current location Test case

Test Case ID: AN001	Test Designed by: Yomal Karunanayake
Test Priority (Low/Medium/High): High	Test Designed date: 23/07/2017
Module Name: Current Location function	Test Executed by: Yomal Karunanayake
Test Title: Detect Current Location	Test Execution date: 23/07/2017
Description: Test the Current Location function	Test Type: Functional Testing

Pre-conditions: Input voice command “Current Location” from Home screen

Step	Test Steps	Test Data	Expected Result	Actual Result	Status (Pass/Fail)	Comments
1	-	Received uuid from the Beacon ={1F78A721-8CC2-9C68-36B6-3F74C3BF5294}.	The Current Location is outputted as a Voice output.	Voice output = “ <i>Main entrance, to start navigating select the navigation function from the Home screen</i> ”.	Pass	Current location is auto detected by the application through the Bluetooth signal.

Post-conditions: User is redirected to the Home screen

Table 3: Detect Current Location – No signal Test case

Test Case ID: AN002	Test Designed by: Yomal Karunanayake
Test Priority (Low/Medium/High): Medium	Test Designed date: 23/07/2017
Module Name: Current Location function	Test Executed by: Yomal Karunanayake
Test Title: Detect Current Location – No signal	Test Execution date: 23/07/2017
Description: Test the Current Location function, No Bluetooth signal received.	Test Type: Functional Testing

Pre-conditions: Input voice command “Current Location” from Home screen

Step	Test Steps	Test Data	Expected Result	Actual Result	Status (Pass/Fail)	Comments
1	-	-	No beacons message.	Voice output = “ <i>No Beacons in range, Redirecting to Home screen</i> ”.	Pass	No Bluetooth signal detected for current location.

Post-conditions: User is redirected to the Home screen

Table 4: Detect Bluetooth Signal Test case

Test Case ID: AN003	Test Designed by: Yomal Karunanayake
Test Priority (Low/Medium/High): Medium	Test Designed date: 23/07/2017
Module Name: Current Location and Navigation	Test Executed by: Yomal Karunanayake
Test Title: Detect Bluetooth Signal	Test Execution date: 23/07/2017
Description: Test to detect the nearest Bluetooth signal for the Current location and Navigation functions.	Test Type: Unit Testing

Pre-conditions: -	Post-conditions: -
--------------------------	---------------------------

Step	Test Steps	Test Data	Expected Result	Actual Result	Status (Pass/Fail)	Comments
1	Run current location activity	-	Beacon uuid outputted in the logcat as the nearest place.	Beacon uuid outputted in the logcat as the nearest place.	Pass	

```
.yomal.apiitnavigation I/TextToSpeech: Set up connection to ComponentInfo{com.google.and
.yomal.apiitnavigation D/BluetoothAdapter: STATE_ON
.yomal.apiitnavigation D/BluetoothLeScanner: onClientRegistered() - status=0 clientIf=6
.yomal.apiitnavigation D/Beacon: Nearest Place: 1f78a721-8cc2-9c68-36b6-3f74c3bf5294
.yomal.apiitnavigation D/BluetoothAdapter: STATE_ON
.yomal.apiitnavigation I/TextToSpeech: Sucessfully bound to com.google.android.tts
```

Figure 70: Detect Bluetooth Signal actual result

Table 5: Navigation function Test case

Test Case ID: AN004	Test Designed by: Yomal Karunanayake
Test Priority (Low/Medium/High): High	Test Designed date: 23/07/2017
Module Name: Navigation function	Test Executed by: Yomal Karunanayake
Test Title: Navigation	Test Execution date: 23/07/2017
Description: Test the Navigation function	Test Type: Functional Testing

Pre-conditions: Input voice command “Navigation” from Home screen

Step	Test Steps	Test Data	Expected Result	Actual Result	Status (Pass/Fail)	Comments
1	-	Received uuid from the Beacon ={D36F4997-3385-1408-02A7D46D1FAF}.	The Current Location is given as a Voice output. Prompts the user to enter a Destination.	Voice output 1 = “ <i>Your current location is Library</i> ”. Voice output 2 = “ <i>Tap the middle of the screen and say the Destination</i> ”.	Pass	Current location is auto detected by the application through the Bluetooth signal.
2	Tap the screen and enter “Elevator 2” as the voice input	Destination = {elevator 2}.	Prompts the user to confirm destination as a voice output.	Voice output 3 = “ <i>Destination is Elevator2. To confirm tap once, or to re-enter the destination tap twice.</i> ”.	Pass	

3	Confirm Destination by tapping the screen once.		Notifies the user to tap the screen to get steps, as a voice output.	Voice output 4 = “ <i>Tap the screen to get instructions</i> ”.	Pass	
4	Tap Screen for Steps.		Navigation Steps are given as Voice outputs.	Voice output 5 = “ <i>TURN AROUND <Break> WALK 12 FEET <Break> TURN RIGHT <Break> WALK 8 FEET <Break> TURN LEFT, you are now at your Destination</i> ”.	Pass	<Break> = waiting for the user to tap on the screen.
5	-		Current Location (Destination) is given as a voice Output.	Voice output 6 = “ <i>You are now next to Elevator 2</i> ”.	Pass	Current location is auto detected by the application through the Bluetooth signal.

Post-conditions: User is redirected to the Home screen

Table 6: Navigation retry Test case

Test Case ID: AN005	Test Designed by: Yomal Karunanayake
Test Priority (Low/Medium/High): High	Test Designed date: 23/07/2017
Module Name: Navigation function	Test Executed by: Yomal Karunanayake
Test Title: Navigation retry	Test Execution date: 23/07/2017
Description: Test the Navigation function, When the beacon signal is not detected and the function is reloaded.	
Test Type: Functional Testing	

Pre-conditions: Input voice command “Navigation” from Home screen

Step	Test Steps	Test Data	Expected Result	Actual Result	Status (Pass/Fail)	Comments
1	-		Prompts the user to enter a selection as a voice output.	Voice output 1 = “No Beacons in range, you can choose one of the following options. Tap the middle of the screen and 1. Say retry, to try again. 2. Say scan, to manually scan the current location. 3. Say home, to return to the home screen. Or 4. Say the location name if you already know the current location”.	Pass	No Bluetooth signal detected for location.

2	Tap the screen and enter “Retry” as the voice input.	Input = retry.	Page is reloaded.	Page is reloaded.		
3	-	Received uuid from the Beacon ={D36F4997-3385-1408-02A7D46D1FAF}.	The Current Location is given as a Voice output. Prompts the user to enter a Destination.	Voice output 2 = “ <i>Your current location is Library</i> ”. Voice output 3 = “ <i>Tap the middle of the screen and say the Destination</i> ”.	Pass	Current location is auto detected through the Bluetooth signal.
4	Tap the screen and enter a “Elevator 2” as the voice input	Destination = {elevator 2}.	Prompts the user to confirm destination as a voice output.	Voice output 4 = “ <i>Destination is Elevator 2. To confirm tap once, or to re-enter the destination tap twice.</i> ”.	Pass	
5	Confirm Destination by tapping the screen once.		Notifies the user to tap the screen to get steps, as a voice output.	Voice output 5 = “ <i>Tap the screen to get instructions</i> ”.	Pass	
6	Tap Screen for Steps.		Navigation Steps are given as Voice outputs.	Voice output 6 = “ <i>TURN AROUND <Break> WALK 12 FEET <Break> TURN RIGHT <Break> WALK 8 FEET <Break> TURN LEFT, you are now at your Destination</i> ”.	Pass	<Break> = waiting for the user to tap on the screen.
7	-		Current Location (Destination) is given as a voice Output.	Voice output 7 = “ <i>You are now next to Elevator 2</i> ”.	Pass	Current location is auto detected through the Bluetooth signal.

Post-conditions: User is redirected to the Home screen

Table 7: Navigation with manual scan Test case

Test Case ID: AN006	Test Designed by: Yomal Karunanayake
Test Priority (Low/Medium/High): Medium	Test Designed date: 23/07/2017
Module Name: Navigation function	Test Executed by: Yomal Karunanayake
Test Title: Navigation with manual scan	Test Execution date: 23/07/2017
Description: Test the Navigation function, With manual scan when no beacon being detected in current location.	Test Type: Functional Testing

Pre-conditions: Input voice command “Navigation” from Home screen

Step	Test Steps	Test Data	Expected Result	Actual Result	Status (Pass/Fail)	Comments
1	-		Prompts the user to enter a selection as a voice output.	Voice output 1 = “No Beacons in range, you can choose one of the following options. Tap the middle of the screen and 1. Say retry, to try again. 2. Say scan, to manually scan the current location. 3. Say home, to return to the home screen. Or 4. Say the location name if you already know the current location”.	Pass	No Bluetooth signal detected for location.

2	Tap the screen and enter “Scan” as the voice input.	Input = scan.	Notifies the user to tap the screen when ready to get instructions, as a voice output.	Voice output 2 = “ <i>Tap the screen to get instructions to manually scan</i> ”.		
3	Tap the screen to start getting manual scan instructions.		Gives out steps to start manually scanning as voice outputs.	Voice output 3 = “ <i>Follow these steps., Tap the screen after each step is done. 1. Hold your mobile phone at the level of the door handle. 2. Determine you are at arm’s length from the wall. 3. Position yourself right side of the doorway. Immediately after where the door frame ends. 4. Hold your phones camera outwards</i> ”. Voice output 4 = “ <i>Tap the screen to start scanning</i> ”.	Pass	
4	Tap the screen to start scanning		The current location is given as a voice output. Prompts the user to enter a destination as a voice output.	Voice output 5 = “ <i>Current location is Library</i> ”. Voice output 6 = “ <i>Tap the middle of the screen and say the Destination</i> ”.	Pass	
5	Tap the screen and enter a “Elevator 2” as the voice input	Destination = {elevator 2}.	Prompts the user to confirm destination as a voice output.	Voice output 7 = “ <i>Destination is Elevator 2. To confirm tap once, or to re-enter the destination tap twice.</i> ”.	Pass	
6	Confirm Destination by		Notifies the user to tap the	Voice output 8 = “ <i>Tap the</i> ”.	Pass	

	tapping the screen once.		screen to get steps, as a voice output.	<i>screen to get instructions</i> ".		
7	Tap Screen for Steps.		Navigation Steps are given as Voice outputs.	Voice output 9 = " <i>TURN AROUND <Break> WALK 12 FEET <Break> TURN RIGHT <Break> WALK 8 FEET <Break> TURN LEFT, you are now at your Destination</i> ".	Pass	<Break> = waiting for the user to tap on the screen.
8	-		Current Location (Destination) is given as a voice Output.	Voice output 10 = " <i>You are now next to Elevator 2</i> ".	Pass	Current location is auto detected by the application through the Bluetooth signal.

Post-conditions: User is redirected to the Home screen

Table 8: Navigation with manual scan Test case

Test Case ID: AN007	Test Designed by: Yomal Karunanayake
Test Priority (Low/Medium/High): High	Test Designed date: 23/07/2017
Module Name: Navigation function	Test Executed by: Yomal Karunanayake
Test Title: Navigation with manual scan	Test Execution date: 23/07/2017
Description: Test the Navigation function, With manual scan when scanning is interrupted.	Test Type: Functional Testing

Pre-conditions: Input voice command “Navigation” from Home screen

Step	Test Steps	Test Data	Expected Result	Actual Result	Status (Pass/Fail)	Comments
1	-		Prompts the user to enter a selection as a voice output.	Voice output 1 = “ <i>No Beacons in range, you can choose one of the following options. Tap the middle of the screen and 1. Say retry, to try again. 2. Say scan, to manually scan the current location. 3. Say home, to return to the home screen. Or 4. Say the location name if you already know the current location</i> ”.	Pass	No Bluetooth signal detected for location.

2	Tap the screen and enter “Scan” as the voice input.	Input = scan.	Notifies the user to tap the screen when ready to get instructions, as a voice output.	Voice output 2 = “ <i>Tap the screen to get instructions to manually scan</i> ”.		
3	Tap the screen to start getting manual scan instructions.		Gives out steps to start manually scanning as voice outputs.	Voice output 3 = “ <i>Follow these steps., Tap the screen after each step is done. 1. Hold your mobile phone at the level of the door handle. 2. Determine you are at arm’s length from the wall. 3. Position yourself right side of the doorway. Immediately after where the door frame ends. 4. Hold your phones camera outwards</i> ”. Voice output 4 = “ <i>Tap the screen to start scanning</i> ”.	Pass	
4	Tap the screen to start scanning.		Scanning unsuccessful message is given as a voice output.	Voice output 5 = “ <i>Scanning was interrupted!</i> ”.	Pass	

Post-conditions: User is redirected to the Home screen

Table 9: Navigation function Home Input Test case

Test Case ID: AN008	Test Designed by: Yomal Karunanayake
Test Priority (Low/Medium/High): High	Test Designed date: 23/07/2017
Module Name: Navigation function	Test Executed by: Yomal Karunanayake
Test Title: Navigation function Home input	Test Execution date: 23/07/2017
Description: Test the navigation function, Returning to Home screen when no beacon being detected in current location.	Test Type: Functional Testing

Pre-conditions: Input voice command “Current Location” from Home screen

Step	Test Steps	Test Data	Expected Result	Actual Result	Status (Pass/Fail)	Comments
1	-		Prompts the user to enter a selection as a voice output.	Voice output 1 = “No Beacons in range, you can choose one of the following options. Tap the middle of the screen and 1. Say retry, to try again. 2. Say scan, to manually scan the current location. 3. Say home, to return to the home screen. Or 4. Say the location name if you already know the current location”.	Pass	No Bluetooth signal detected for location.
2	Tap the screen and enter “Home” as the voice input.	Input = home.	Redirect the user to the Home screen.	Redirected to the Home screen	Pass	

Post-conditions: None

Table 10: Navigation with voice Test case

Test Case ID: AN009	Test Designed by: Yomal Karunanayake
Test Priority (Low/Medium/High): Medium	Test Designed date: 23/07/2017
Module Name: Navigation function	Test Executed by: Yomal Karunanayake
Test Title: Navigation with voice	Test Execution date: 23/07/2017
Description: Test the Navigation function, With current location with voice input when no beacon being detected for current location.	Test Type: Functional Testing

Pre-conditions: Input voice command “Navigation” from Home screen

Step	Test Steps	Test Data	Expected Result	Actual Result	Status (Pass/Fail)	Comments
1	-		Prompts the user to enter a selection as a voice output.	Voice output 1 = “ <i>No Beacons in range, you can choose one of the following options. Tap the middle of the screen and 1. Say retry, to try again. 2. Say scan, to manually scan the current location. 3. Say home, to return to the home screen. Or 4. Say the location name if you already know the current location</i> ”.	Pass	No Bluetooth signal detected for location.

2	Tap the screen and enter “Library” as the voice input.	Input = library.	User input is given as a voice output. Prompts the user to confirm current location.	Voice output 2 = “ <i>Current location is Library. To confirm tap once, or to re-enter the location tap twice.</i> ”.	Pass	
3	Tap the screen once to confirm current location.		Prompts the user to enter a destination as a voice output.	Voice output 3 = “ <i>Tap the middle of the screen and say the Destination</i> ”.	Pass	
4	Tap the screen and enter a “Elevator 2” as the voice input	Destination = {elevator 2}.	Prompts the user to confirm destination as a voice output.	Voice output 4 = “ <i>Destination is Elevator 2. To confirm tap once, or to re-enter the destination tap twice.</i> ”.	Pass	
5	Confirm Destination by tapping the screen once.		Notifies the user to tap the screen to get steps, as a voice output.	Voice output 5 = “ <i>Tap the screen to get instructions</i> ”.	Pass	
6	Tap Screen for Steps.		Navigation Steps are given as Voice outputs.	Voice output 6 = “ <i>TURN AROUND <Break> WALK 12 FEET <Break> TURN RIGHT <Break> WALK 8 FEET <Break> TURN LEFT, you are now at your Destination</i> ”.	Pass	<Break> = waiting for the user to tap on the screen.
7	-		Current Location (Destination) is given as a voice Output.	Voice output 7 = “ <i>You are now next to Elevator 2</i> ”.	Pass	Current location is auto detected by the application through the Bluetooth signal.

Post-conditions: User is redirected to the Home screen

Table 11: Navigation – re-enter destination Test case

Test Case ID: AN010	Test Designed by: Yomal Karunanayake
Test Priority (Low/Medium/High): High	Test Designed date: 23/07/2017
Module Name: Navigation function	Test Executed by: Yomal Karunanayake
Test Title: Navigation – re-enter destination	Test Execution date: 23/07/2017
Description: Test the Navigation function, Re-enter destination when the given destination is incorrect.	Test Type: Functional Testing

Pre-conditions: Input voice command “Navigation” from Home screen

Step	Test Steps	Test Data	Expected Result	Actual Result	Status (Pass/Fail)	Comments
1	-	Received uuid from the Beacon ={D36F4997-3385-1408-02A7D46D1FAF}.	The Current Location is given as a Voice output. Prompts the user to enter a Destination.	Voice output 1 = “ <i>Your current location is Library</i> ”. Voice output 2 = “ <i>Tap the middle of the screen and say the Destination</i> ”.	Pass	Current location is auto detected by the application through the Bluetooth signal.
2	Tap the screen and enter a “Classroom” as the voice input	Destination = {classroom}.	Prompts the user to confirm destination as a voice output.	Voice output 3 = “ <i>Destination is Classroom. To confirm tap once, or to re-enter the destination tap twice.</i> ”	Pass	

3	Tap the screen twice.		The Current Location is given as a Voice output. Prompts the user to enter a Destination.	Voice output 4 = <i>“Your current location is Elevator 1”</i> . Voice output 2 = <i>“Tap the middle of the screen and say the Destination”</i> .	Pass	
4	Tap the screen and enter a “Elevator 2” as the voice input	Destination = {elevator 2}.	Prompts the user to confirm destination as a voice output.	Voice output 5 = <i>“Destination is Elevator 2. To confirm tap once, or to re-enter the destination tap twice.”</i>	Pass	
5	Confirm Destination by tapping the screen once.		Notifies the user to tap the screen to get steps, as a voice output.	Voice output 6 = <i>“Tap the screen to get instructions”</i> .	Pass	
6	Tap Screen for Steps.		Navigation Steps are given as Voice outputs.	Voice output 7 = <i>“TURN AROUND <Break> WALK 12 FEET <Break> TURN RIGHT <Break> WALK 8 FEET <Break> TURN LEFT, you are now at your Destination”</i> .	Pass	<Break> = waiting for the user to tap on the screen.
7	-		Current Location (Destination) is given as a voice Output.	Voice output 8 = <i>“You are now next to Elevator 2”</i> .	Pass	Current location is auto detected through the Bluetooth signal.

Post-conditions: User is redirected to the Home screen

Table 12: Navigation – destination invalid Test case

Test Case ID: AN011	Test Designed by: Yomal Karunanayake
Test Priority (Low/Medium/High): High	Test Designed date: 23/07/2017
Module Name: Navigation function	Test Executed by: Yomal Karunanayake
Test Title: Navigation – destination invalid	Test Execution date: 23/07/2017
Description: Test the Navigation function, When the destination does not exist in the database.	Test Type: Functional Testing

Pre-conditions: Input voice command “Navigation” from Home screen

Step	Test Steps	Test Data	Expected Result	Actual Result	Status (Pass/Fail)	Comments
1	-	Received uuid from the Beacon ={D36F4997-3385-1408-02A7D46D1FAF}.	The Current Location is given as a Voice output. Prompts the user to enter a Destination.	Voice output 1 = “ <i>Your current location is Library</i> ”. Voice output 2 = “ <i>Tap the middle of the screen and say the Destination</i> ”.	Pass	Current location is auto detected by the application through the Bluetooth signal.
2	Tap the screen and enter a “Room 2” as the voice input	Destination = {room 2}.	Prompts the user to confirm destination as a voice output.	Voice output 3 = “ <i>Destination is Room 2. To confirm tap once, or to re-enter the destination tap twice.</i> ”.	Pass	

3	Confirm Destination by tapping the screen once.		Notifies the user that the destination is invalid as a voice output.	Voice output 4 = “ <i>Destination does not exist in the database</i> ”.	Pass	
---	---	--	--	---	------	--

Post-conditions: User is redirected to the Home screen

Table 13: Locations Test case

Test Case ID: AN012	Test Designed by: Yomal Karunanayake
Test Priority (Low/Medium/High): High	Test Designed date: 23/07/2017
Module Name: Locations function	Test Executed by: Yomal Karunanayake
Test Title: Locations	Test Execution date: 23/07/2017
Description: Test the Locations function	Test Type: Functional Testing

Pre-conditions: Input voice command “Locations” from Home screen

Step	Test Steps	Test Data	Expected Result	Actual Result	Status (Pass/Fail)	Comments
1	-	-	Prompts the user to enter a Floor.	Voice output 1 = “ <i>Tap the middle of your screen once and say a floor to listen to the locations in that floor</i> ”.	Pass	
2	Tap the screen once and enter “6 th Floor” as the voice input.	floor = {6th Floor}.	2Outputs floor locations as a voice output.	Voice output 2 = “ <i>ELEVATOR 6, CAFETERIA, GENTS PRAYER ROOM, LADIES PRAYER ROOM, FIRE EXIT 6</i> ”.	Pass	

Post-conditions: User is redirected to the Home screen

Table 14: Locations – invalid floor Test case

Test Case ID: AN013	Test Designed by: Yomal Karunanayake
Test Priority (Low/Medium/High): High	Test Designed date: 23/07/2017
Module Name: Locations function	Test Executed by: Yomal Karunanayake
Test Title: Locations – invalid floor	Test Execution date: 23/07/2017
Description: Test the Locations function, When the floor input is invalid.	Test Type: Functional Testing

Pre-conditions: Input voice command “Locations” from Home screen

Step	Test Steps	Test Data	Expected Result	Actual Result	Status (Pass/Fail)	Comments
1	-	-	Prompts the user to enter a Floor.	Voice output 1 = “ <i>Tap the middle of your screen once and say a floor to listen to the locations in that floor</i> ”.	Pass	
2	Tap the screen once and enter “10 th floor” as the voice input.	floor = {10th Floor}.	Outputs invalid input message as a voice output.	Voice output 2 = “ <i>Invalid floor input 10th floor</i> ”.	Pass	

Post-conditions: User is redirected to the Home screen

Table 15: Search Test case

Test Case ID: AN014	Test Designed by: Yomal Karunanayake
Test Priority (Low/Medium/High): High	Test Designed date: 23/07/2017
Module Name: Search function	Test Executed by: Yomal Karunanayake
Test Title: Search	Test Execution date: 23/07/2017
Description: Test the Search function	Test Type: Functional Testing

Pre-conditions: Input voice command “Search” from Home screen

Step	Test Steps	Test Data	Expected Result	Actual Result	Status (Pass/Fail)	Comments
1	-	-	Prompts the user to enter a Location.	Voice output 1 = “ <i>Tap the middle of your screen once and say a location to find the floor</i> ”.	Pass	
2	Tap the screen once and enter “Library” as the voice input.	location = {library}.	Outputs the floor of the Location as a voice output.	Voice output 2 = “ <i>Library is in the second floor</i> ”.	Pass	

Post-conditions: User is redirected to the Home screen

Table 16: Search – location invalid Test case

Test Case ID: AN015	Test Designed by: Yomal Karunanayake
Test Priority (Low/Medium/High): High	Test Designed date: 23/07/2017
Module Name: Search function	Test Executed by: Yomal Karunanayake
Test Title: Search – location invalid	Test Execution date: 23/07/2017
Description: Test the Search function, When the location input is invalid.	Test Type: Functional Testing

Pre-conditions: Input voice command “Search” from Home screen

Step	Test Steps	Test Data	Expected Result	Actual Result	Status (Pass/Fail)	Comments
1	-	-	Prompts the user to enter a Location.	Voice output 1 = “ <i>Tap the middle of your screen once and say a location to find the floor</i> ”.	Pass	
2	Tap the screen once and enter “Communications Room” as the voice input.	location = {communications room}.	Output invalid input message as a voice output.	Voice output 2 = “ <i>Location communications room does not exist, try the locations function to listen to all available locations</i> ”.	Pass	

Post-conditions: User is redirected to the Home screen

Table 17: Guide - Current Location Test case

Test Case ID: AN016	Test Designed by: Yomal Karunanayake
Test Priority (Low/Medium/High): High	Test Designed date: 23/07/2017
Module Name: Guide function	Test Executed by: Yomal Karunanayake
Test Title: Guide - Current Location	Test Execution date: 23/07/2017
Description: Test the Guide function, Current location topic.	Test Type: Functional Testing

Pre-conditions: Input voice command “Guide” from Home screen

Step	Test Steps	Test Data	Expected Result	Actual Result	Status (Pass/Fail)	Comments
1	-	-	Prompts the user to enter a Guide Topic as a voice output.	Voice output 1 = “ <i>Select one of the following to start listening to the guide on how to use this application. 1. Current location. 2. Navigation. 3. Locations. 4. Search. 5. Other. 6. About. 7. Exit. Please tap the middle of the screen and say a topic or say Home to go back to Home screen.</i> ”.	Pass	
2	Tap the screen once and enter “Current Location” as the voice input.	result = current location	Output current location guide as a voice output.	Voice output 2 = “ <i>Current location function allows you to identify your current location. Whenever you are close to a doorway or an entrance,</i> ”	Pass	

				<i>or when you have entered a floor through the lift or through the staircase, deploy the current location function to identify your location. To start the current location function, tap the middle of your phone screen and say current location while in the home screen”.</i>
